introduction

simple system identification

BioHorizons prosthetics include several features to simplify the restorative process. (1) color coding on all components; (2) laser marking on the healing abutments; and (3) emergence profile for soft tissue contour.

1 | Color coding

BioHorizons prosthetic components are color coded to match the BioHorizons implant prosthetic platforms.

Note: The 3.0 implant and prosthetic components maintain their natural titanium color to distinguish them from the other diameters.

2 | Laser marking

BioHorizons healing abutments are laser-marked for easy identification without having to remove them from the implant site. Laser marking describes the platform size, emergence profile, abutment height and Laser-Lok.

Prosthetic Platform
- Y = Yellow (3.5mm)
- G = Green (4.5mm)
- B = Blue (5.7mm)

* 3.0 healing abutments cannot be laser-marked due to their small size.

Simple Solutions healing abutments are differentiated by a slightly different coding scheme:

Simple Solutions
- S = Simple Solutions

Prosthetic Platform
- Y = Yellow (3.5mm)
- G = Green (4.5mm)
- B = Blue (5.7mm)

Emergence Profile
- N = Narrow
- R = Regular
- W = Wide

Abutment Height
- 1, 3 or 5mm

Laser-Lok
- L = Laser-Lok

3 | Emergence profile

It is important to use components with the same emergence profile throughout the restorative process. This will enable easy seating of prosthetic components, without soft tissue impingement, and will maximize esthetics.

abutment types

**Healing abutments**

BioHorizons healing abutments are offered for every implant diameter, abutment emergence and collar height. Healing abutments are color coded and laser-marked for easy identification and are available with Laser-Lok.

**Temporary abutments**

Temporary abutments provide options for intermediate esthetic restorations, tissue contouring, and immediate function. BioHorizons offers a wide variety of temporary abutments for both screw-retained and cement-retained restorations.

**Impression copings**

BioHorizons impression copings are available in different types to meet every impression making preference.

**Cementable abutments**

BioHorizons cementable abutments are offered in a wide variety of styles and sizes to meet the patient's site conditions.

**Esthetic abutments**

For anterior cases, BioHorizons esthetic abutments are designed to follow the scalloped gingiva and minimize the amount of modification. These abutments can be ordered with Laser-Lok to create a connective tissue attachment and maintain the crestal bone.
abutment types

**Simple Solutions abutments**
The Simple Solutions abutments with Laser-Lok are designed to be seated at the time of implant placement and remain in place through final restoration. This simplifies the restorative process, because a single abutment is used for temporization, impression making and final restoration. Laser-Lok technology establishes and maintains connective tissue attachment.

**Patient-specific abutments**
For anterior cases that require a precise, customized esthetic solution, BioHorizons patient-specific abutments are the perfect choice. Offered in full titanium and hybrid zirconia, both offer the precision fit of the BioHorizons connection but are milled to accurately meet the site conditions. Custom cast abutments are also available in hexed and non hexed.

**Multi-unit abutments**
The BioHorizons Multi-unit abutment system provides the tools to restore even compromised edentulous cases. With a wide variety of abutment angles, collar heights and platform diameters, no system offers better options for treating patients’ individual needs. The Multi-unit abutment’s intelligent design and restorative flexibility is matched only by its ease of use and surgical efficiency in immediate load situations.

**Overdenture abutments**
Overdenture abutments are often used with as few as two implants, making implant therapy affordable for many patients. Locator abutments and ball abutments are ideal for retaining dentures in both the maxilla and the mandible.
prosthetic instrumentation

Prosthetic kit

The enhanced prosthetic instrument kit contains the basic instrumentation necessary to place BioHorizons prosthetic abutments and screws. The kit has spaces available for try-in abutments and optional instrumentation such as torque wrenches.

*some instruments shown are sold separately

Torque wrenches

Precision torque wrenches are available to meet all prosthetic applications and preferences. From simple to fully adjustable or precision automatic, BioHorizons offers a full range of choices in torque wrench design and function.

Hex drivers

BioHorizons offers a wide variety of .050” hex drivers to use for installing and removing cover caps, healing abutments and prosthetic screws.
