

Dental implants look and feel like your natural teeth and can last a lifetime.

Post-implant care

Dental implant treatments can transform your life. Care for them just as you would your natural teeth, and they can last a lifetime. Talk with your dental professional for personalized care instructions tailored to you.

- Following surgery, go easy on your new implants by not disturbing the wound, eating soft foods and getting some rest. You can return to normal activities within a day or two, but your dentist may recommend a softer diet for a few weeks.
- Good oral hygiene is essential to healing. Brush your teeth carefully with a soft toothbrush after every meal, particularly after breakfast and before bedtime.
- Follow the advice of your dental professional when it comes to regular checkups and professional teeth cleanings.

Smile big, eat what you want and be a confident you!

"Having dental implants has made me feel better about myself!"
