benefits of replacing multiple missing teeth with dental implants

**TeethXpress®**
- secure, natural looking teeth remain stable in your mouth with no need for removal
- does not require use of costly adhesives and is low maintenance
- preserves jawbone, reducing the appearance of premature aging
- restores proper chewing ability up to 100%, allowing a better diet and improved health
- minimally invasive and can generally be completed in one day
- a long-lasting solution

**implant-supported denture**
- more secure than a conventional denture, although must be removed daily for cleaning
- requires less adhesive than a conventional denture
- preserves jaw bone in the front of the mouth only
- restores chewing ability to 25-40%
- increases comfort with less irritation of gum tissue than a conventional denture
- final prosthesis can be utilized 3-6 months after procedure

**conventional denture**
- removable and unstable, often shifting when speaking and eating
- requires costly adhesives
- can further jawbone recession and the appearance of premature aging
- chewing ability is commonly reduced to 5-15% over long-term use, leaving limited food choices
- lower cost initially, but requires continued maintenance costs through lifetime
- will need to be remade or relined to compensate for bone loss
- can be made within a few weeks

99.2% average success rate\(^1\) of BioHorizons dental implants used exclusively for TeethXpress®

prevent premature aging with dental implants

When a tooth is lost, the jawbone begins to shrink and becomes brittle from lack of exercise. Losing teeth not only affects your smile, it also changes the shape of your face causing you to look prematurely aged.

Dental implants prevent premature aging and bone loss caused by missing teeth.

effects of tooth loss

When a tooth is lost, the jawbone begins to shrink and becomes brittle from lack of exercise. Losing teeth not only affects your smile, it also changes the shape of your face causing you to look prematurely aged.

Dental implants prevent premature aging and bone loss caused by missing teeth.

treatment options for single tooth replacement

untreated missing tooth
- unattractive smile
- loss of chewing ability
- accelerated bone loss

traditional crown & bridge
- grinds down healthy teeth
- bone loss continues
- greater risk for cavities and tooth failure

dental implant with a crown
- full chewing ability
- preserve healthy teeth
- prevent bone loss
